

ClimaCore

Empowering change from the core

Presented by,
ICB

Concept

ClimaCore is a mobile app designed to help people learn about climate change and take real action. It makes environmental responsibility fun, social, and rewarding.

Imagine you're scrolling through an app where you get small eco-friendly tasks, like using less plastic or reporting litter, and earn points for completing them. You also get real climate news and can chat with an AI assistant for sustainable project ideas. That's ClimaCore.

Overview ✨

The world faces a huge climate crisis, and most people don't know how to help. ClimaCore solves this by turning climate learning into daily action. Through gamified tasks, volunteering activities, Artificial Intelligence and an engaging community system, it makes climate action a habit, not just a concept.

What is SDGs 13

13 CLIMATE ACTION

Take urgent action to combat climate change and its impacts.

Climate Action

SDG 13 emphasizes the need for immediate and coordinated global efforts to tackle climate change. It calls on all countries to strengthen their resilience and adaptive capacity to climate-related hazards, integrate climate measures into policies and planning, and raise awareness through education and engagement. Achieving this goal requires global cooperation, climate-smart innovation, and inclusive climate action at every level—government, private sector, and individuals.

The Problems

Despite rising climate anxiety, many students lack access to accurate, up-to-date information about climate disasters, policies, or real-life stories. News sources are fragmented, and most school curriculums don't provide practical ways to act. Moreover, the opportunities that do exist (workshops, local events, sustainability campaigns) are scattered across platforms, poorly promoted, or not youth-friendly.

Lack of information or opportunities

Audience Needs Addressed

- Real-time awareness
- Actionable group goals
- From concern to action

ClimaCore centralizes information and turns awareness into action:

- Students can access real-time information such as environmental news, climate disaster alerts, and sustainability education — all in one place, making it easier to stay informed.
- Lack of opportunities is addressed by offering group-based and eco-friendly missions that are easy to join and designed for youth participation.
- By combining awareness with action, students aren't just learning — they're engaging in sustainable and collaborative tasks that make climate response part of their everyday life.

Solution:

ClimaSights

Purpose

To shift students from passive knowledge to active, empowered climate responders.

Target 13.1

Strengthen resilience and adaptive capacity to climate related disasters

ClimaCore

Students today are under immense pressure. Academic demands, private tutoring, extracurriculars, and family obligations leave little room for voluntary participation in external programs. While some students may want to get involved in climate action, it often becomes the first thing to drop off their schedule.

Additionally, many climate-related activities are held on weekends or after school — times when students prefer rest or are already committed to other tasks. As a result, climate action is treated as something “extra” instead of something integral.

Audience Needs Addressed

- In-class climate activities
- Collective participation
- No extra time

Lack of time
to participate in
activities

Target 13.3

Build knowledge and capacity to meet climate change

ClimaCore

Many students lack clarity on how to take action. While they might hear about climate change in class or online, they're rarely given structured opportunities to act. Finding credible events, understanding what's expected, and organizing logistics can feel confusing and exhausting. For students, the effort to locate, plan, or lead climate actions is often greater than the effort to participate. This cognitive and logistical overload leads to inaction.

It is too cumbersome
to participate
in such activities

Audience Needs Addressed

- Shared climate actions
- Easy to join, not find
- Lower participation barriers

ClimaCore removes this friction by replacing “searching” with “joining.”

Through group missions and shared activity feeds, students can:

- Instantly see what others are doing.
- Tap into pre-existing community events like cleanups or tree-planting.
- Participate with one click — without needing to organize from scratch.

Solution:

ClimaConnect

Purpose

To make climate participation feel simple, spontaneous, and social, rather than confusing or overwhelming.

Target 13.3

Build knowledge and capacity to meet climate change

ClimaCore

Traditional approaches to climate action (lectures, poster-making, recycling drives) often fail to connect with youth interests. They feel repetitive, passive, and disconnected from real-world impact. For digital-native generations, fun and engagement are essential to sustained participation. Without an emotional or interactive hook, even the most passionate students will lose interest quickly.

Activities
are not
fun or interesting

Audience Needs Addressed

- Mission-based structure
- Gamified motivation
- Ongoing participation

ClimaCore gamifies the climate journey.

By turning missions into interactive challenges, using real-world GPS movements, and offering streaks, leaderboards, and green points, the app:

- Creates positive feedback loops that keep students coming back.
- Taps into students' love for games, progress, and competition.
- Builds long-term climate habits through fun, not force.

Solution:

ClimaGame

Purpose

To transform climate action from a chore into a motivating, rewarding experience that builds consistent habits.

Leaderboard & Reward

The Leaderboard page allows users to toggle between weekly and all-time rankings, showcasing the top users based on their green points, along with their name, profile picture, and points. The current user's position is highlighted, and the weekly winner is prominently featured. This page is designed to motivate users to stay engaged and compete for higher ranks. Additionally, green points can be redeemed for gift cards and vouchers from partnered organizations, offering users a tangible reward for their environmental efforts.

Design of Algorithm ✨

Competitive Landscape ✨

Main Competitors

Climate Action 1.5°C App: Quiz-based with limited exploration

Klima: Focus on carbon tracking and offsetting

Forestep: Limited community engagement

Earth Hero: General eco- and fitness-conscious users

Joro: Complex onboarding

ClimaCore

ClimaCore's Edge

- Integrated platform: Education, habits, community, and impact tracking
- Gamification + verified real-world data
- Localized events + global campaigns
- Partnerships with NGOs, city planners, and eco-brands

Difference with Other Apps

Competitor	Other Apps	ClimaCore
Climate Action 1.5°C App	Quiz-based with limited exploration	AI-powered, personalized and interactive learning
Klima	Focus on carbon tracking and offsetting	Daily hands-on climate missions
Forestep	Limited community engagement	Youth-centered, learning-oriented
Earth Hero	General eco- and fitness-conscious users	A community where students can participate
Joro	Complex onboarding	Easy to use

Go-to-Market Plan ✨

To ensure ClimaCore reaches the right hands and sparks real-world climate action, we've crafted a strategic Go-to-Market Plan. It focuses on targeted audiences, powerful positioning, and impactful pre-launch and launch strategies that build momentum from the ground up.

ClimaCore

Phase 1: Community Seeding & Awareness (Months 1–3)

- Partner with eco clubs at schools & universities
- Roll out teaser reels & influencer collaborations
- Launch #GreenWithClimaCore campaign across socials
- Beta tester contest with Green Point leaderboard rewards

Phase 2: Growth & Engagement (Months 4–8)

- City-focused rollouts in Seoul, Busan, Jeju & beyond
- Empowered local leaders via Green Ambassador Program
- Partnered with NGOs to promote ClimaGame
- Hosted on-ground eco-activities through ClimaConnect

Phase 3: Scale & Retention (Months 9–12)

- Introduced sponsored leaderboards with green brands
- Monthly themed challenges to boost engagement
- PR push showcasing real user impact & milestones
- Featured by sustainability blogs and climate media

Target Segments vs. Opportunity Index

Who Benefits from ClimaCore?

- Youth (7–18) passionate about climate action.
- Students living in climate-affected areas wanting to get involved.
- Youth promoting sustainability.
- Volunteers and eco-enthusiasts seeking organized engagement.

Who Are Our Audience?

- Primary users: Climate-conscious youth globally.
- Early adopters: Schools, universities, NGOs, and community groups.
- Institutions: Global educational bodies, local governments, and nonprofits.
- Sponsors: Eco-friendly brands and donors supporting climate causes.

ClimaCore

Demand for Our Services

- Rising climate awareness across all age groups.
- Need for a platform combining education, gamification, and local action.
- Schools and NGOs seeking scalable climate engagement tools.
- Few apps offer a holistic and multi-generational experience like ClimaCore.

Market Size & Potential

- Billions of youth and adults worldwide face climate risks, especially in urban areas.
- Millions of schools, NGOs, and governments focus on climate initiatives.
- Climate Tech market projected at \$27B by 2030.
- Climate engagement apps have grown 60% since 2020.

Target Market & Market Opportunity

Pre-launch Development:

- Complete final app testing and user interface refinements.
- Finalize partnerships with environmental organizations for early-stage collaboration.

Beta Testing:

- Launch beta version in 5 schools to gather feedback from 1,000+ users.
- Achieve 80% positive feedback on app usability and feature functionality.

User Acquisition & Engagement:

- Build a waitlist of 5,000 interested users through social media and pre-launch campaigns.
- Generate early interest by hosting 3 online events focused on sustainable habits and eco-friendly practices.

Partnerships & Collaborations:

- Secure partnerships with 3 eco-friendly brands and influencers for promotional campaigns.
- Collaborate with 2 sustainability-focused organizations to support community challenges post-launch.

App Launch Readiness:

- Prepare for an official launch with a fully functional app available in the App Store and Google Play.
- Finalize a roadmap for post-launch updates based on beta testing feedback and user needs.

Marketing & Brand Awareness:

- Launch pre-launch marketing campaigns to build anticipation and educate users on the importance of sustainable habits.

Milestones & Momentum

Why ClimaCore

ClimaCore is not just an app, it's a movement platform. This app helps students take more social climate actions.

Unlike other climate apps that focus on isolated tasks or passive information, ClimaCore turns awareness into real impact through gamified, community-driven, and verified engagement.

Gamified Climate Action System

- Green Points, streaks, levels, and reward loops encourage long-term habit building.
- Tasks scale from game missions to global volunteering missions.

Built-in Climate AI Assistant

Answers questions, gives personalized tips, and guides users on eco-journeys. Adaptive, multilingual, and conversational — like a climate-savvy friend.

Community + Real-Time Collaboration

- Social feed with public task streaks, team goals, and group events.
- Geo-based interactions: neighbors clean parks together, schools compete on climate scores.

Verified Actions, Real-World Rewards

- Actions (like tree planting, biking, etc.) verified via image uploads, GPS.
- Earn digital badges, climb community leaderboards

Thank You!
